ALIGNMENT

What is DTI alignment?

Coupling alignment often called DTI alignment is the present way of aligning two coupling within the tolerance of 0,05mm.

This is achieved by using two clock gauges reading the radial and axial misalignment of the couplings.

Learning Outcomes

The learner will be able to :

- Set and align either rigid or flexible couplings precisely.
- Read and interpret the DTI readout measurement.
- Accurately use the metric torque wrench

This blended training includes:

Detailed course notes

Progress Activities to keep learning on track

Videos illustrating best practices & operational practices

Practical Coaching, demonstrations & operational exercises

Each Learner will Receive:

A Workbook including progress quizzes

A Pen

Unit Standard Aligned

Grab your SEAT Now

Course Duration : 5 Days

Cost: R3500 (excl)
